

Nanoleaf Remote

Smarter At Every Turn

The Nanoleaf Remote is a sleek dodecahedron inspired Bluetooth HomeKit remote designed to enhance user experience and make controlling the Nanoleaf light panels and other HomeKit products even more convenient. Each of the Remote's 12 sides can be programmed with commands. Rotate to a side to activate the command. With each rotation the Remote will glow in different color to provide user feedback. Do anything from turning off your Nanoleaf Light Panels, to setting the mood for date night, switching to a Rhythm Scene when there's music, and even activating scenes for controlling 3rd party HomeKit products. You can fully customize what you want the Remote to do within the Nanoleaf app, the possibilities are endless.

Coming Early 2018!
